## Dimensions

## Notes

Large paper copy of ‘the greatest and finest atlas ever published’ (Koeman).

The ‘Atlas Major’ in its various editions was the largest atlas ever published. It was justly famed for its production values, its high typographic standard, and the quality of its engraving, ornamentation, binding and colouring. The atlas frequently served as the official gift of the Dutch Republic to princes and other authorities. It is one of the most lavish and highly prized of all seventeenth-century illustrated books.

The maps are embellished in the Baroque style, and many rank among the most beautiful ever made. Of particular note are the famous side-panelled maps of the continents, the 58 maps devoted to England and Wales (vol. 4 ), Martini’s Atlas of China, the first atlas of China published in Europe (vol. 9 ), and a series of 25 maps of America, including important early maps of Virginia and New England (vol. 8 ).
