

Folio (463 by 315mm), [60] ll., title-page framed by a woodcut border, on verso of the same leaf woodcut coat-of-arms of the joint dedicatees Charles V and his brother Ferdinand of Spain, 53 eleven-line and 39 six-line historiated woodcut initials by Hans Brosamer, 36 full-page woodcut astronomical figures coloured by a contemporary hand, of which 21 have a total of 83 volvelles [complete], 42 [of 44] silk threads, and 11 [of 12] pearls, full-page woodcut arms of the author by Michael Ostendorfer on fol. O6, a small letterpress cancel slip on recto of fol. K1 correcting the text, contemporary panelled blind-stamped pigskin over pasteboards, spine in six compartments separated by raised bands, remains of ties.

## **“THE MOST SPECTACULAR CONTRIBUTION OF THE BOOK-MAKER’S ART TO SIXTEENTH-CENTURY SCIENCE”**

**Astronomicum Caesareum.**

**Author**

APIANUS, Petrus

**Publication date**

1540

**Publisher**

Peter Apian,

**Publication place**

Ingolstadt,

**Physical description**

Folio (463 by 315mm), [60] ll., title-page framed by a woodcut border, on verso of the same leaf woodcut coat-of-arms of the joint dedicatees Charles V and his brother Ferdinand of Spain, 53

eleven-line and 39 six-line historiated woodcut initials by Hans Brosamer, 36 full-page woodcut astronomical figures coloured by a contemporary hand, of which 21 have a total of 83 volvelles [complete], 42 [of 44] silk threads, and 11 [of 12] pearls, full-page woodcut arms of the author by Michael Ostendorfer on fol. O6, a small letterpress cancel slip on recto of fol. K1 correcting the text, contemporary panelled blind-stamped pigskin over pasteboards, spine in six compartments separated by raised bands, remains of ties.

### **Notes**

First edition of “the most luxurious and intrinsically beautiful scientific book that has ever been produced” (de Solla Price), in an extraordinary hand-coloured early issue, as attested by the letterpress cancel slip on fol. K1r, preserved in a beautiful contemporary German binding.

The author of this popular textbook in astronomy is Petrus Apianus, astronomer and professor of mathematics at Ingolstadt, and a veritable pioneer in the production of astronomical and geographical devices.

Apianus’s work on the project began eight years before and the ‘Astronomicum Caesareum’, which was printed in his private press at Ingolstadt, is considered “the most spectacular contribution of the book-maker’s art to sixteenth-century science” (Gingerich, “Apianus’s Astronomicum Caesareum”).

The handbook is divided in two parts. The first (ll. B1-M3) includes 40 chapters with maps reproducing the position and the movement of celestial bodies. The second part describes the meteroscope, an instrument designed to solve problems in spherical trigonometry, and relates the sighting of five comets: “The Astronomicum is notable for Apian’s pioneer observations of comets (he describes the appearances and characteristics of five comets, including Halley’s) and his statement that comets point their tails away from the sun. Also important is his imaginative use of simple mechanical devices, particularly volvelles, to provide information on the position and movement of celestial bodies” (DSB).

The volvelles in the work are each placed within a frame reminiscent of an astrolabe, a contemporary device that modelled the movement of the heavens in two dimensions and enabled the calculation of time and place, and assisted with astrology. The first moveable woodcut, which represents the planispheric astrolabe, compresses both hemispheres onto one plate. According to the text, the plate depicts 1,033 stars, and was based on the first printed star charts published in 1515 by Albrecht Dürer.

The most spectacular of the volvelles, which are the work of the artist Michael Ostendorfer, are the dragon plates. These include the title-page and the double-page spread dragon and moon dials. The dragon dial can be used to calculate the nodes of the moon, the two points of intersection between the yearly path of the sun, and the plane of the lunar orbit, which produce eclipses. Dragons were associated with eclipses, which were believed to occur when their head or tail blocked the sun. The thirteen small dragons indicate different parts of the lunar cycle.

For the dissemination of calculating technology in a standardized and reproducible form, the appearance of “paper instruments” has been compared to nothing less than the advent of printing (Poulle).

“Some thirty-five copies of the Astronomicum Caesareum are known today. Fabulously expensive to produce and prohibitively expensive to buy, it was always a rare book. Nicholas Wotton reported in 1544 from the Diet of Speyer that Apian would give Henry VIII a copy, for otherwise the king would

not be able to get hold of it; Edmund Halley tried in vain to obtain a copy" (Hebron).

The present example represents one of the, if not the, most complete copy to have ever appeared on the market: the Horblit copy lacked 23 volvelles and one pearl, while the Honeyman copy lacked seven volvelles, one silk thread, and nine pearls.
