

"New and Improved edition". Double-page engraved chart, with contemporary hand-colour in outline.

WITH THE ADDITION OF THE "ISLES DE COOKE"

Karta over Polynesian eller femte delen af jordklotet = Carte de la Polynesie ou la cinquieme partie de la terre af Daniel Djurberg, rector, Ledamot af Cosmografiska Sallsk. i Upsala.

Author

DJURBERG, Daniel

Publication date

1790.

Publisher

Saljes hos Bokhandlar en Holmberg, 1780; Ny och forbattrad Uplaga,

Publication place

Stockholm,

Physical description

"New and Improved edition". Double-page engraved chart, with contemporary hand-colour in outline.

Dimensions

471 by 721mm (18.5 by 28.5 inches).

Notes

First published in 1780. Here with the addition of the track of Cook's third and final voyage. "The

most notable change, however, is the addition of the Hawaiian Island “Isles de Cooke”, which required removing and re-engraving to the left of the cartouche in French. Also specifically noted are the establishment of “Colonie Anglaise” at Port Jackson and at Norfolk Island. The outline of other Pacific islands have been updated, most notably New Guinea” (Brown).

In 1776 Djurberg wrote: “the world is divided into 5 main parts: 1. Europe, 2. Asia, 3. Africa, which makes up one large island, 4. America, which makes up the other island, 5. Polynesia, which includes all the large and small islands which cannot be joined to any of the previous four continents and includes, among others, the large island Ulimaroa, which in old geographies is known as New Holland”.

Djurberg believed “Ulimaroa to be the New Zealand Māori name for Australia, meaning “big red land”, a belief that he justified in 1801: “You find in the account of the famous English sailor Cook’s journeys that when he was on the northern coast of New Zealand, he asked the inhabitants there if they knew any other country, to which they replied that to the north-west of their home, a quite large land was located, which they named Ulimaroa”. More recent scholarship on this origin story suggests that not only was Djurberg wrong in believing the Māori were referring to Australia here, but the name Ulimaroa is also somewhat of a misnomer, and almost certainly did not translate to “big red land”. It is more likely that the island to which the Māori people were referring was New Caledonia or an island in Fiji, and a name more accurately transcribed as Rimaora, not Ulimaroa” (Stone).

The mapmaker

Daniel Djurberg (1744-1834) “was a Swedish geographer and a member of the Cosmographical Society of Uppsala. He was one of the first to publish Capt. Cook’s discoveries in Sweden and the first to adopt the native name “Ulimaroa” for the Australian Continent” (Tooley).
