Reyne, R.N., H.M.S. Merlin, 1911, and Capt. F.C.C. Pasco, R.N., H.M.S. Merlin 1912-1913.

Author
HYDROGRAPHIC OFFICE

Publication date
New Edition 21st October, 1927. Small Corrections to 1932.

Publisher
Published at the Admiralty,

Publication place
London,

Physical description
Engraved chart, including tidal information, compass roses, soundings, seabed notations, currents, sandbanks, shoals, lighthouses and beacons picked out in yellow and red, inland elevations and detailing, buildings, and land to be reclaimed.

Dimensions
1030 by 700mm (40.5 by 27.5 inches).

Notes
Detailed chart of Hong Kong’s Western Waters.

The British Hydrographic Office was founded in 1795 by George III, who appointed Alexander Dalrymple as the first Hydrographer to the Admiralty. The first charts were produced in 1800. Unlike the U. S. Coast Survey the Hydrographic Office was given permission to sell charts to the public and they produced a great number of sea charts covering every corner of the globe. Most of the Admiralty charts produced by the Hydrographic Office delineated coastline as well as high and low water marks and record depth of water as established by soundings. In addition these charts included information on shoals, reefs, and other navigational hazards that plagued mariners across the world. Thanks to the innovations of Sir Francis Beaufort, who developed the Beaufort Scale of wind strength, the British Hydrographic Office became one of the leading producers of sea charts. In fact, such was their accuracy that the phrase ‘Safe as an Admiralty Chart’ was coined.
